Akka's Attestation of Compliance with ISO/IEC 27001

At Akka, we are committed to maintaining the highest standards of information security to protect our customers, partners, and stakeholders. Our security program is designed to align with internationally recognized best practices, including the **ISO/IEC 27001:2022** standard for Information Security Management Systems (ISMS).

Our Compliance Approach

Akka has implemented an ISMS that adheres to the requirements of **ISO/IEC 27001:2022**, ensuring that:

- A **risk-based approach** is applied to identify, assess, and mitigate security risks.
- Information security policies, controls, and procedures are **documented, monitored, and continuously improved** to meet evolving threats and business needs.
- Security practices are embedded across **people, processes, and technology** to protect the confidentiality, integrity, and availability of data.
- Regular **internal audits, risk assessments, and security reviews** are conducted to ensure ongoing effectiveness and compliance.
- We track, review and ensure compliance with **over 100 controls** specific to this framework, as a part of our overall compliance, governance and security stance.

Certification Status

While Akka **has not undergone external certification** for ISO/IEC 27001:2022 compliance, we have implemented the necessary controls and processes in alignment with the standard. Our adherence to ISO/IEC 27001 principles is validated through **internal assessments and independent third-party audits of our security practices**, ensuring transparency and accountability in our security commitments.

Commitment to Security and Continuous Improvement

Akka continuously evaluates and enhances our security posture to meet industry best practices and regulatory requirements. We remain committed to the security of our customers' data and welcome inquiries regarding our security controls and compliance posture.
